## **A NEW PROFESSIONAL SKILLS AND QUALIFICATIONS ACCREDITATION SYSTEM IN EURASIAN REGION**

The process leading to the mutual recognition of professional qualifications between different specialists in Eurasia region took more several years. This article describes the conceptual context, the conditions of the agreement, the adaptation period program, the number of specialists involved, and the importance of maintaining professional standards in the international context and the system of independent qualifications assessment.

This paper focuses on employees acquire new competences and qualifications throughout their lives, in order to be able to deal with the multiple changes in the labour market in real estate or others spheres. The specific knowledge and competences, acquired either formally or non-formally, must be recognized so that they can be transferred and utilized. The existing titles of studies and accreditation mechanisms do not generally cover this need. This paper aims to propose an integrated digital approach for the evaluation of knowledge and skills, regardless of where and how they have been acquired, so as to apply a continuous education and training policy. The proposed multicriteria methodology for the evaluation of qualifications and skills concerns candidates wishing to be accredited in a real estate specialization or profession in Eurasia region. The methodology refers to the digital evaluation of the professional experience, studies and vocational training of the candidates for accreditation. It contains the system of independent qualification evaluation. The proposed digital approach has been adapted to the Russian professional system and is applied to a specific example of candidates.
