## **THE MOST BEAUTIFUL AND UNUSUAL PLANTS IN THE WORLD**

In my report I want to tell you about the most beautiful and unusual plants on the Earth, about incredible forms and colors of flowers, about unique peculiarities.

Let's talk about shapes and colors of flowers. *Habenaria radiata* has unique shape of the flowers, reminiscent of a flying white egret, that's why it is called orchid of White egret. *Rhododendron* is very beautiful in his flowering. People say about wisteria: if at least once you had the good fortune to see the wisteria blooming, then this is never forgotten! *Strongilodon* flowers are unique in shape and brilliant-green color of inflorescence.

*Diphyllaria grayi* is a seemingly ordinary white flower, but when drops of rain fall on its petals they become transparent. And *haworthia* Cooper generally has transparent leaves. *Selenicereus* in appearance is not the most attractive cactus. However, it has one incredible feature: it gives people a flower only one night a year.

It is interesting that the color of some hydrangeas depends on the pH level and that the Bird of Paradise flower can reach 10 meters in height. *Passiflora* and hydrangea were among the first flowers of the New World to fall in the gardens of Europe.

Have you ever heard about eucalyptus that grows in the Northern Hemisphere and its bark has all the colors of the rainbow? Do you know which plant is called gypsy earring? No? Well, I will tell you about the unforgettable wonders of nature!
